Improvement.

WHAT ADVANCE MEANS

Nevada Con. Is a Typical Example of New Profits at Present Time.

The assertion frequently is heard to effect that the prices of the big cop ues have not reflected in anything l a just proportion the improvement in copper metal market. During the p months the metal has gone fro alightly over 12 cents a pound to 18 cen and while marked improvement has be noted in the general copper list the m jority of authorities agree that there room for copper share appreciation

What this advance in the price of co per means can be appreciated readily studying the report of any of the b producers, of which the Nevada Conso dated company is an example. In the r port for the fifteen months preceding D cember 31, 1912, this company producreceived an average of 123 cents p pound. It cost the company an average of 6.97 cents per pound to produce 1 metal, leaving it a margin of profit 5.63 cents per pound, or 5,63.261 growas received for the copper product.

What Advance Means.

What Advance Means.

Copper at the present time is selling for 15 cents a pound, or 32 cents in excess of what the Nevada Consolidated received last year. Under the present market therefore, the company would receive net \$2,748,344 more for its copper than during the fifteen months mentioned. The gross value of the 78,541,270 pounds would have been \$12,567,265 instead of \$9,818,261. Under the existing conditions, if the Nevada Consolidated company is securing 16 cents for its metal, the company is operating at a profit of \$9.30 cents per pound of copper produced instead of 5,53 cents last year.

Nevada Consolidated was selling on Thursday for \$19,872 a share. During 1911, when the company was receiving the low figure for its metal, the stock sold for as high as \$21,50 and as low as \$15,572 a share. In other ways the company is in a much better postion today to operate than a year ago. It has made improvements in its ore handling system and still greater strides will be made this year. The mine on January 1, 1912, held 49,853,371 tons of ore in developed form, enough to keep the company going at the present rate for between ten and fifteen years, against 40,360,823 tons on October 1, 1919, an increase of nearly a half million tons despite the extraction during the period of over three and one-third million tons.

Case Is Typical.

Case Is Typical.

The case of the Nevada Consolidated company is typical and is mentioned especially in view of the fact that its report has just been given to the public, the first report to show really what the advance in the price of copper means to the industry. In the light of these facts it is plain why the eastern market authorities have been looking to the copper issues as the principal motive power to pull the big stock markets from the dumps.

BUNKER HILL MILL NOW TREATING ORE

The Bunker Hill & Sullivan Mining company's mill, costing \$275,090, placed in commission at Kellogg, Idaho, a few days ago, is the largest silver-lead concentrating plant in the world. Its capacity is 35,000 tons a month. The mill is operated by electricity, 750 horsepower being required. Construction work was started in 1907, the first unit with rock house and conveyor being completed in December, 1910. The mill is equulppel with ore bins of 2000 tons.

Concrete and native timber were used in the buildings, which have ample fire protection. Features of the treatment of ores are the desliming of the lig feed in the classified jigs, a mill for fine grinding, conical screens, drag type classifier, classifiers and air lift for returning the overflow from the ore bins and alime tanks. The mill also is equipped with an automatic sampling system.

The rock house, a separate department, has a capacity of the contract of

The rock house, a separate department, has a capacity of 200 tons of rock hourly, enabling it to supply the mill with sufficient townage of ornshed rock to run full twenty-four hours by operating the rock house only eight hours. This department is equipped with picking beits and facilities for sorting first-class shipping ore and mine waske, if so desired, also an automatic weighing device.

BRIGHT SPOTS AMONG

STILL ARE CHEAP

There were several issues stronger and in demand Thursday on the local exchange, a few Tintics enjoying increased trading, like the Plutus and Ring William, while Columbus Extension was one of the unlisted features. The mine conditions are reported to be extramely favorable. May Day has developed a pronounced weakness, which as yet is not explained.

Sales yesterday totaled 58,690 shares of stock, the market value of which was \$8843,75. The following were the closing unlisted and listed stock transactions:

Palne. Webber & Co., Boston—The action of the local market was rather disappointing today. The volume of transactions in the coppers was very small and the price changes unimportant. A further advance in the price of the metal is confidently expected in the near future and this should be the signal for further heavy buying in the local coppers Quincy was very strong today, and it is confidently expected that the next dividend will be at the rate of \$6 a year.

pers Quincy was very strong today, and it is contidently expected that the next dividend will be at the rate of \$6 a year.

Logan & Bryan, New York—The coalers were conspicuous for their strength during today's session, which, taken in connection with the advices available as to the progress as to the settlement of the strike among the anthracite coal mines, denotes that the matter as a stock market influence has in great part discounted its effect. Quite a few specialities were active, notably the Can issues, also People's Gas, which was favorably influenced by the decision in the company's favor, and, too United States Rubber stocks were actively absorbed by interests which are assumed to be in close touch with the company's affairs. Satisfactory progress is being recorded in connection with the matter of adjusting the difficulties between the engineers and the railroads, but, of course, the affair is still one which is likely to excert a marked influence on stock market sentiment. An attempt to force Steel below II was momentarily successful, but the issue recovered quickly, and though of late it has shown a disposition to lag, still we believe that after the reports of earnings for the first quarter have been published the influence of the recent advances in the prices of finished steel products will be more of a factor than recently in determining the course of the issue.

We still believe that the general frend of prices is upward, but substantial interests, according to our observations, are inclined to await further developments in connection with politics, both domestic and international and also the labor situation, before encouraging in tense operations on the constructive side, though at the same time it is feit that any depressions which may occur are not illicity to be drastic in the absence of imforeseen happenings of an adverse nature.

THE SHADE YESTERDAY WILBERT MILL IS READY TO START

Commence Work at Any Hour.

MODEL OF ITS KIND

Delays Suffered by Weather Prevent Work Being Ready as Scheduled.

Within a day or two the Wilbert com pany of Idaho will begin active milling this information being operations. brought to Salt Lake on Thursday by 24 A. S. Ross, one of the company's officials. This plant has been erected under the personal supervision of Consulting Engineer Maurice M. Johnson of Salt Lake City, the ores having been given a thorough testing out and the plans for the plant having been prepared by the late A. J. Bettles, who was one of the best known mill experts of the 13 country.

Country.

There have been numerous delays in assembling the various parts of this plant, the officials having expected to place it in commission many weeks ago. But the fact that the plant is located forty miles from the railroad tracks, and the additional fact that the work of construction was in the midst of a severe winter, have retarded the work at almost each turn. Two weeks ago there were some remaining parts awaiting the journey to the mill site, and the teams were expected daily to make the trip, but these are just getting to the property on account of the several severe blizzards which have swept over the country.

blizzards which have swept country.

Mr. Ross states that as originally designed the plant is to treat 100 tons of ore daily but there is crushing and power capacity for 150 tons, and this capacity can be attained by the addition of a few new tables. Mr. Ross pronounces it as finely a constructed plant of its character as is to be found anywhere and the officials look forward to actual operations meeting all expectations.

tions,

Mr. Ross is president of the FlitsburgIdaho company, which is located at Gilmore. Idaho. He was the founder of
the first bank at Gilmore, an institution,
as are all the business institutions of the
town, now enjoying a splendid prosperity.
The payroll of Gilmore camp is between
\$25,000 and \$32,000 monthly, and it will
grow constantly. Work is progressing
smoothly on the new drainage and
operating funnel of the Gilmore section,
an enterprise in which the PittsburgIdaho company has joined with the Gilmore and Allie Mining companies.

Mr. Ross made the trip to the Wilbert
with Mr. Johnson, who remained to witness the initial operations of the mill.

ZINC COMBINE IS DENIED IN EAST

It was reported yesteriay that the American Zinc, Lead & Smelting and the Butte & Superior companies were planning to consolidate, which would bring together the control largely of the Zinc production and guarantee that the market price of the inetal would suffer fewer fluctuations. Following closely upon this report came the authorized denial of President H. S. Kimball of the American Zinc company. The Butte & Superior company has a considerable local interest, D. C. Jackling being a director, while the American Zinc company numbers several local shareholders. A. F. Holden is a director.

MARSH COMPANY TO NEW OFFICIALS OF SHIP ORE TO UTAH

Idaho Silver-Lead Plant Will Another Idaho Company Has President Aldrich and Secre-Contracted Output to the International.

> While the International Smelting & Rereverberatory furnaces originally in holders announcing their withdrawal with splendid success in acquiring a lead reasons the distance of their headquar-ore tonnage for the two blast furnaces of ters from the Goldfield camp. They re-

the new lead smelter. It is stated that the Marsh company of the Coeur d'Alene section has just entered into a contract with the international company by which the lead-silver ore product of this property for five years will be smelted at Tooele.

The Marsh property is not far distant from the Hecia mine which latter proposition sarly contracted its product to the International. What the Hecia product is worth can be guthered from the fact that the company has just paid its April dividend of \$20,000, making \$80,000 paid out during the first four months of 1912, and a total of \$23,30,000 since the profit-sharing era was reached.

Resarding the Marsh mine, J. V. Pohlman of the Pohlman Investment company, which owns a large interest in the property, says the ore was found at a varical depth of 456 feet below the No. 2 tunnel and 800 feet below the surface. The company has started to operate its mill at two-thirds capacity and will put on the third shift the coming summer. The property, which adjoins the Tiger-Poorman, in the vicinity of the Hecia and Gertle, was discovered by Mark Cooney, John Kelley and Frank Murphy in 1907, and was taken over by the present company in 1909. The controlling interest is vested in E. L. Cowell, president of the corporation, and United States Senator Joseph M. Dixon, both of Missoula, and Eugene Carroll of Butte, Mont.
